One terminal, more functions

Why limiting your Windows Mobile computers to barcode reading and data collection? E2K Phone lets you embed into your system a powerful VoIP softphone.

Keep in touch with your workforce at any moment, without additional costs; increase productivity and reduce errors by adding a new communication channel.

Outgoing calls can be limited to the contact list (which includes names and photographs) or unrestricted.

Easy to use and control

E2K Phone is powerful but easy to use, with an easy to use interface.

Among the main features*:

- manage contact list and favorites, with names and photographs
- dynamic filtering on contact list while dialing
- caller ID
- dialpad, also available during the call
- codec priority configuration
- stun server support
- intercept non-VoIP calls
- single button to bring to front or minimize application
- vibration and LED blinking on incoming calls
- missed call list
- password protected configuration
- supported codecs: G722, PCMU, PCMA, speex, GSM
- PC configurator to change settings and manage contact list

* some functions could not be available on specific devices. Windows Mobile computer must be approved by Storm Open Solutions.
