# E2K Store

## Generic counter sales

E2K Store is a software solution for different kinds of retail enterprises: shops of various types and sizes, workshops, etc. It is available as a version of E2K Suite for generic points of sale.

Designed and expanded over years of development side-by-side with business operators, our software has all the features you might need and the ease of use you would expect from a latest generation application.

Fast and reliable, E2K Store has a completely customizable interface, rich and captivating; as soon as you will start using it you will wonder how you did before.

E2K Store offers all the functions you need for your business: sales on the tip of your fingers using touch screen; orders and purchases; receipts and payments; budgets; repayment schedules; inventory management; delivery notes and invoices; petty cash book, and so on.

E2K Store can: manage multiple warehouses; keep you informed about orders to suppliers, internal transfers and receiving of goods; manage BOMs and transformations of articles; show your sales in real-time.

You can control your warehouse status using advanced statistics, including safety stocks, sales and inventory controls, as well as assessing the productivity of your operators. By using E2K Store you can save time on everyday tasks, increasing productivity and control on your staff and your business; with E2K Store everything will be more simple, fluid and fast.

# Our experience at your service

E2K Store modular structure lets you activate the features you need when you need them; at the same time, it ensures that you get a uniform interface across the different functions, decreasing employees' training time.

TouchScreen

E2K Store is the result of years spent on the field: our software includes everything you might need in a convenient, easy-to-use, flexible and customizable package, to make you feel "at home" even if you used different applications before.

E2K Store is designed as an enterprise solution, so it leverages on high-performance and high-security industry standards: Microsoft SQL Server 2008 R2 for data, Crystal Reports for report creation and 256-bit AES encrypted ZIP archives.

Many different devices are supported: most ECRs on the market, non-fiscal printers, Jusp and Ingenico payment terminals, Android and Windows Mobile computers (for assisted inventories), generic data collection devices, scanners, tag and chip-card readers and much more.

# Our software, your working method

By using E2K Store you can save time on everyday tasks, increasing productivity and control on your staff and your business. Different access levels and flexible profile settings let you assign to every employee his own role, making available just the functions and the information that belongs to him.

The creation of area panels and cash boards is a snap; you can import hi-res graphical images for backgrounds and for every button; images get resized automatically according to screen resolution; buttons can be rectangular or oval, gradient-filled or transparent, if you prefer to display the status of the resources as text "floating" on a picture.

You can link one or several "actions" to every button, thus creating complex sequences. All the selling functions are designed and optimized to be used with touch screens; you can adopt all-in-one touch computers, saving room and achieving greater efficiency.

## Main functions

### Articles and Services

- Simple and compound articles (BOM)
- Services, performance, statistics, various reports

- Support for different languages (Italian, English, French, German)

### Optional software modules

- Jusp and Ingenico POS integration
- Warehouse and bursar's office
- Fidelity management and promotions

# Major supported devices \*

## Fiscal printers and cash registers

E2K Store can drive several cash register models and fiscal printers, emit bills or receipts (depending on the model and its features).

## Non-fiscal printers

Every Windows printer is supported in E2K Store to print many types of documents: statistics, bills, various kinds of reports. Some printers for special applications are also supported natively: emission of orders, receipts, non-fiscal bills, etc.

## Denso BHT terminals

The BHT terminals can be used for assisted inventory operations and for entering data in the provided modules.

## Barcode scanner

E2K Store allows to connect different types of barcode reader, in order to identify the articles being sold or received, making operations faster and reducing error rate.

## Jusp and Ingenico (POS) Payment terminals

With the optional E2K TrayPOS module it is possible to manage the transfer of the amount to the Jusp/Ingenico POS and then wait for the result of the payment; in this way, it is not necessary to type the amount and so there will be no errors like reversed digits, missing decimals, etc. Moreover, the bill or the receipt is emitted only at the end of the payment, when the transaction is confirmed.

## Transponder and chip cards

E2K Store supports read/write devices for transponder/chip cards, to manage electronic payments (debit/credit) or for personal identification.

## External displays

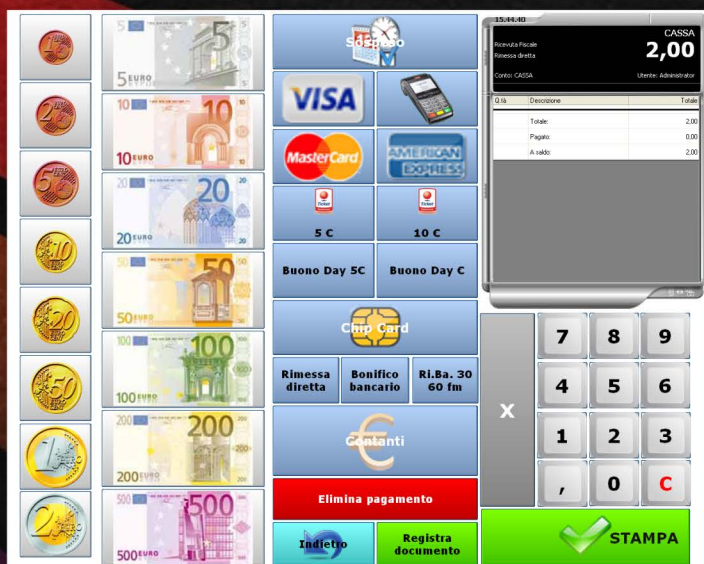

The optional E2K Display module can be integrated with E2K Store to supply the customer with information such as goods being bought, total amount to be paid and change. When no bill is open, E2K Display can be programmed to display adverts (slides and video).

## BuonoChiaro

E2K Store integrates support for Wincor BuonoChiaro technology.

\* Some features are available only with products certified by Storm Open Solutions

# Hardware/software requirements\*

## Stand-alone workstation or Server

**Operating system:** Microsoft Windows XP or higher

**Architecture:** Computer with Intel or compatible processor (recommended 3.2 GHz or higher)\*

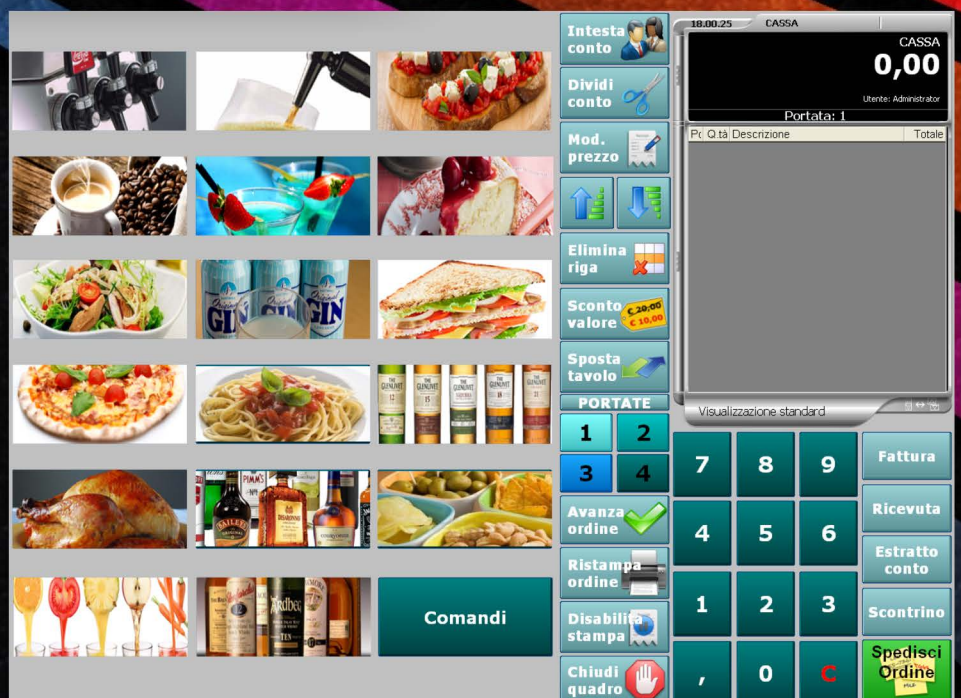

**Memory:** Minimum 2 GB, recommended 4 GB

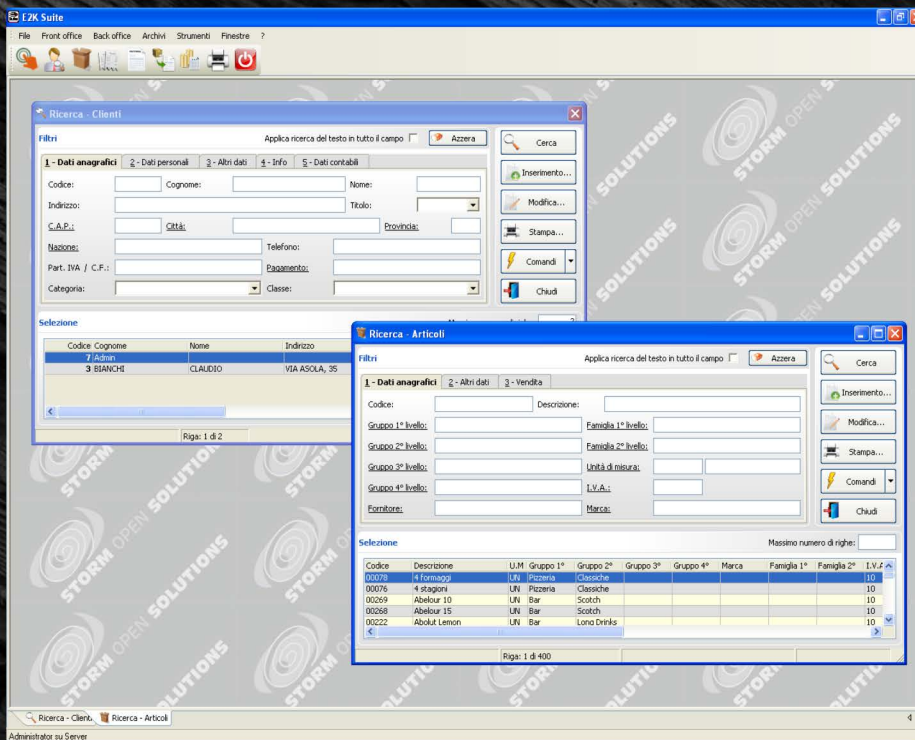

**Disk space:** at least 20 GB of available space, solid state disk recommended

**Display resolutions:** 1024x768 or higher (minimum 768 vertical)

\* The clock indicated refers to single or multi-core desktop CPU, not embedded architectures that prioritize energy savings and are not recommended for performance reasons
